

RM-301 Roller Mill - Service & Operations Manual

1. Subpart Overview

The RM-301 Roller Mill consists of 10 primary subparts monitored by the SCADA system: Main Drive Motor, Transmission Belt, Feeding Roll, Corrugated Grinding Roll Fast, Corrugated Grinding Roll Slow, Roll Gap Sensor, Scraper Knife, Lube Oil Pump, Pneumatic Engagement Cylinder, and Bearing Assembly Top.

2. Grinding Roll Wear

The Corrugated Grinding Rolls are the most critical subparts. Over time, the flutes wear down, dropping efficiency below 100%. A drop in efficiency directly impacts the ability to produce Ultra-Fine Cake Flour.

3. Maintenance Action

If Grinding Roll efficiency drops below 90%, the rolls must be removed and re-fluted in the machine shop.
