LETTER OF RECOMMENDATION

I recommend Mr. Chaitanya Jhindal, a B.Tech Computer Science student at BML Munjal University. I have mentored him on AI and data-driven systems and have observed his consistent engagement, technical understanding, and willingness to explore concepts beyond the curriculum.

During his work on SehatSaathi, an AI-based clinical assistance system, Chaitanya developed a pipeline that converts doctor-patient conversations into structured medical reports. The system integrates multilingual speech-to-text processing and large language models to extract key clinical information such as symptoms, diagnoses, and medications. His work reflects a clear understanding of machine learning, natural language processing, and system design. He approaches problems methodically and shows persistence in refining system performance, particularly in handling unstructured and multilingual data.

Chaitanya has worked on multiple AI applications, including a hospital resource management system (89% accuracy, 35% reduction in scheduling conflicts), as well as projects in multimodal retrieval and large-scale data processing. During his internship, he applied ML and NLP on ERP datasets to improve reporting efficiency. Although I have not directly mentored him, I have observed his work during presentations and discussions, where he demonstrated strong problem-solving skills and a clear understanding of AI concepts.

Chaitanya works well in team settings and takes responsibility for assigned tasks. His experience as a Student Lead and participation in Smart India Hackathon reflect his ability to collaborate effectively and perform in time-constrained environments.

Chaitanya demonstrates technical competence, consistency, and a practical approach to problem-solving. I am confident he will be able to contribute effectively to technical and research-oriented environments.

I recommend him without reservation.

(Dr. Devanjali Relan)
